

Create a TO-DO list app

Tech Stack to be used: Python, Django (Use latest versions)

Requirements:

1. The app should have following fields:

- Title
- Description
- Date & time of the To-do task.
- Status (In progress, completed, pending)
- Created at & Modified at
- is deleted

2. **Login & Authentication is not required.**

3. App should handle all the **CRUD** operations. No fancy things required in frontend. Basic form/list view is enough.

4. Create Django admin interface for this so that an admin user can login and add the entries. **The entry deleted from non-admin interface should be still visible for the Admin.**

5. Admin view should have list display with all the fields from point 1 above.

Provide **search** and **filtering** with required fields in the admin interface.

6. Admin should be able to **download the bulk entries of to-do list in csv** format from Django Admin Interface.

7. Create an API to list all the to do items as well as individual item **without using any API Framework.**

Once it is done, **push your code to your own GitHub** profile with **README** file which has all the steps to setup the project and share it.

Assessment: Based on code quality and quickness.
